

DATA PROTECT AX

Agentless X-Platform Cloud Backup

Scale Multi-TB Backups to the Cloud

Blueshift's agentless cross-platform architecture delivers significant benefits over traditional agent based approaches. DataProtect AX protects all files, databases, email systems and mailboxes. Complete support for all operating systems such as Windows, Linux, Mac and hypervisors. The agentless architecture removes the need to install individual agents on each machine. This simplifies installation and on-going support operations in the customer's environment. It also removes any downtime and disruption associated with installing and maintaining agents.

Windows, Linux, Mac, VMware

Any Device, Application, Platform Support

- Physical and virtual machines
- Protect servers, desktops, laptops, tablets and smart phones

Secure and Compliant

- 256-bit encryption
- Data encrypted in-flight and at rest

Flexible Cloud Deployment

- Public/Private/Hybrid and flexibility to change models

Disaster Recovery

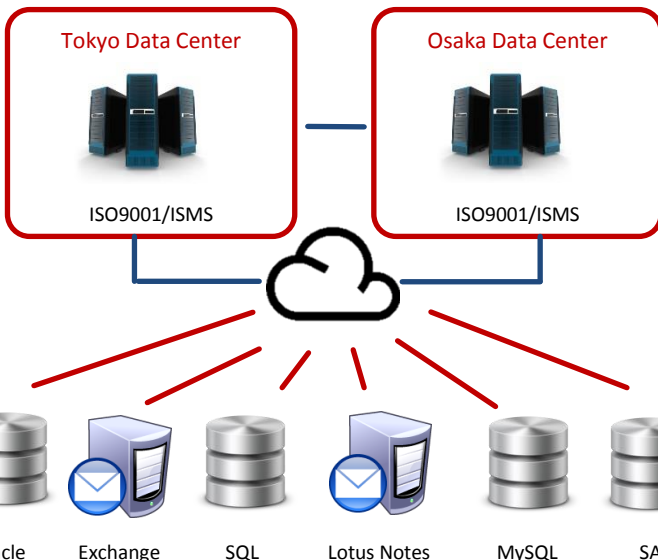

- Backup and restore to Osaka and Tokyo data centers
- Offsite replication and failover

Local Backup and Recovery

- Local backup option for fast backup and recovery
- Address tight Recovery Time Objectives (RTO)

Network and Storage Optimization

- Data reduction through de-duplication and compression
- Reduces WAN/network usage

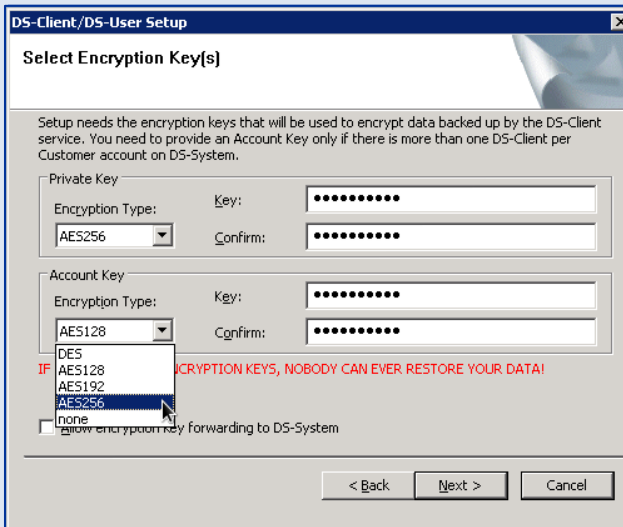

Supported Platforms

Enterprise Applications

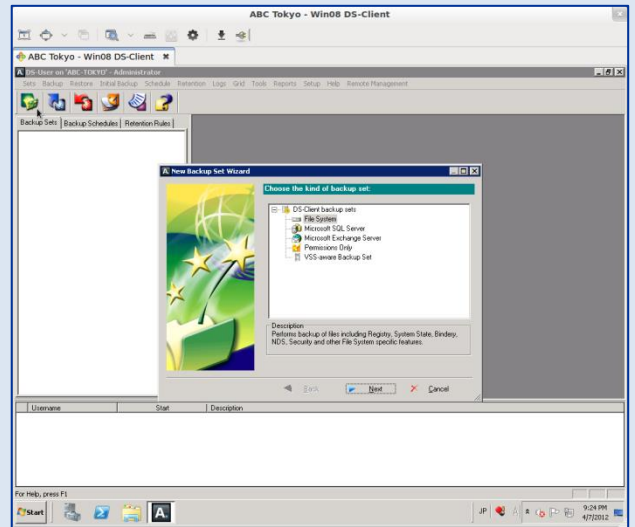

- | | |
|---------------|-------------|
| MS SharePoint | Oracle |
| MS Exchange | DB2 |
| MS Outlook | PostgreSQL |
| MS SQL Server | Sybase |
| SAP | Lotus Notes |
| GroupWise | MySQL |

Set Encryption

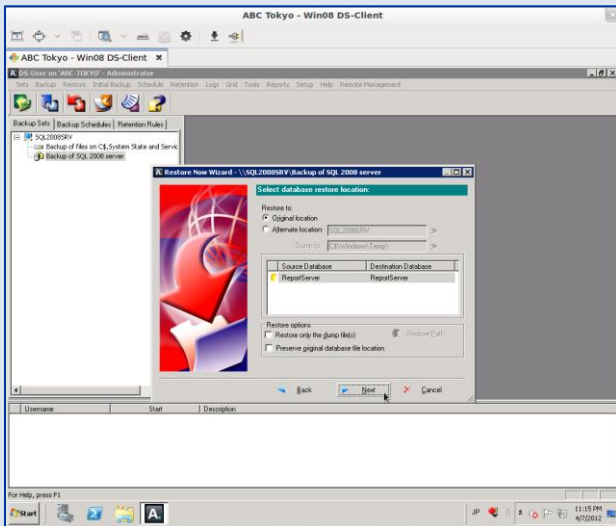

DataProtect AX protects your data at all times with AES 256-bit in-flight and at-rest data encryption.

Backup Wizard

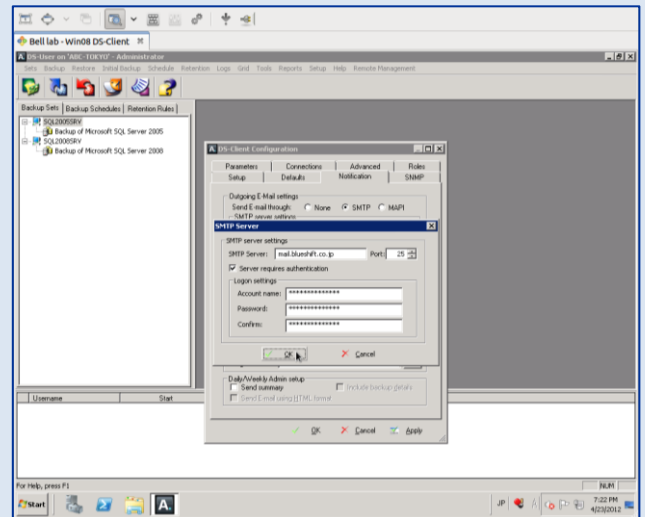

The backup wizard helps you create a backup set by guiding you through the required selections.

Restore Wizard

Initiate new backups and restores within minutes, including point-in-time restores.

Notifications

DataProtect AX can be configured to send e-mail notifications as well as regular email summaries of backup activities.
