

# DPA **DATAPROTECT** **APPLIANCE**

## ON-SITE & OFF-SITE DATA PROTECTION

Blueshift's DataProtect AX service is a highly secure fully redundant off-site data backup and recovery solution. As part of our off-site service Blueshift's delivers a customer designed on-site DataProtect Appliance (DPA). The DPA receives backup files then automatically de-duplicates, compresses and encrypts data before transferring to off-site chosen locations. With your DPA critical data is available on-site and off-site.

*Managed and Maintained by Blueshift*

### SMALL FORM FACTOR

### Public or Private DR Service

- Reduce costly DR site investment and management
- Utilize Blueshift's Public Scale out infrastructure
- Private DR option with data centers of your choice

### Agentless Architecture

- No need to install software agents or reboot servers
- Scales to multiple servers and large data volumes seamlessly
